

Please note that the role of ADMIN was intentionally left out. This needs further discussion.

Currently unknown format. Possibly JSON/XML?

Use display rules based on format, eg for Markup Languages

File format not important. Maybe unify on storage.

Storage of files either completely in DB or in file system and referenced in DB Maybe only store files from web editor in DB and reference other files by ID or sth.

Other files that bundle text with images, like PDF, PPT etc.
